PROJECT WORK

DomoSushi | Java, Spring Boot [[Github](#)]

04/2022

A prototype website created for a family restaurant, used to help users learn about the restaurant and the selection of foods they serve.

- Designed website with HTML using jsp in spring boot.
- Custom CSS used to make a simple and clean visual.

CouchPotato | React, Node, Express, Mongoose, MongoDB [[Github](#)]

03/2022

A extension of the FoodieSpot project, created for users to upload their recipes as well as search and favorite recipes.

- Designed a search box for visitors to be able to create or simply search recipes.
- Integrated weather API with Axios to help the visitors make an informed decision on a recipe based on weather.
- Built the ability to save recipes to their favorite list.

FoodieSpot | Python, Flask, MySQL [[Github](#)]

02/2022

A user-friendly foodie forum community created to help users discuss about food related topics. Used to post troubleshooting issues on how to make a recipe or share great recipes.

- Designed for Users to register/login in order to make posts, users are able to view all posts on their dashboard.
- Users have the ability to reply to posts and provide the creator an informative answer.
